

Friends, a little note about **iLamp**.

We are;
Individual

The iLamp brings a unique flavour to the street lamp market. Allowing the street lamp to stand out.

The iLamp stands out from the crowd, its individual and unique presence performs unique tasks and stores unique data (data on everyday events but also spontaneous events) and can therefore contribute to its surroundings in a unique way, it's a part of your neighbourhood and its connected to every other neighbourhood and can be owned by the inhabitants of the neighbourhood, providing another benefit and most importantly it fosters all individuals to collaborate.

We are;
Independent.

iLamp is off grid, it doesn't need the infrastructure, it powers itself and can be retrofitted to use the grid as a backup where resistance to change away from the grid is met.

Its independence from its financial model to its source of power is not all, it drives a new level of independence to all who interact and benefit from its light. Its modern, clean, smart and efficient and its independence removes the barriers of privacy with security and trust.

We are;
Intelligent.

It is not artificially intelligent, its naturally intelligent, individualAi both individual And intelligent, growing a new way to use tech learning and a new way to gather data and ask it more questions.

It is also stacked full of current and know about tech that when combined brings new levels of efficiency, and that's intelligent. So to sum myself up, I'm independently , individual and intelligent.

Nice to see you.

Love,

iLamp
